Savaria® Luma

Through-floor lift

elegant mobility lives here

The Luma lift from Savaria provides easy access to 2 floors in your home without the need for a shaftway or pit. Finely finished with a luxury feel and panoramic views, the Luma lift is available in a standard size or with a larger cab to accommodate a mobility device. Designed and built by Savaria, a world leader in accessibility products.

savaria®

at-a-glance
Luma lift features

If you're like most people, you want to stay in your home as you age. But if you have stairs, you have a potential barrier for aging-in-place. And while a stairlift can be a great solution for some, the Luma lift can accommodate a mobility device, groceries or your luggage. The Savaria Luma lift offers a simple future-proof way to skip the stairs when you want.

How does the Luma lift work?

With its self-supporting rails, the Luma lift travels up and down without the need for an enclosed shaftway. A simple floor cut-out on the second level provides space for the lift to travel, and upon descent, the floor plug automatically closes off the cut-out for safety.

Reliable, quiet drive

Engineered to work reliably for years to come, the Luma lift runs on a winding drum drive system mounted on the car top. You will notice a gentle start and stop with an overall smooth ride. Known for quiet operation, the drive is battery powered with built-in charging, so even when the power is out, the Luma lift will run for about 5 up and down trips.

Space-saving design

The Luma lift's self-supporting design eliminates the need for installation onto a support wall. That gives plenty of flexibility for placement in your home. Taking a footprint of as little as 38" x 47", the Luma lift is easy to accommodate in many different floorplans.

Luxury details

The fully enclosed powder-coated aluminum and acrylic cabin features a full-sized door with sturdy full-width handrail. When you step inside, the automatic ambient lighting system is both visually elegant and functional for use at night. An active ventilation system keeps you comfortable and adds to the spacious feel. What you won't see are visible travel cables, common with other through-floor lifts.

Standard and larger model

The standard Luma lift is ideal when you want to avoid the stairs. The Luma L features a larger cabin, that will accommodate many styles of mobility devices*. Both models feature a sloped threshold entrance for easy no-trip access. Attractive non-skid flooring in a wood pattern Is included with both lifts. See the specifications to compare model measurements.

** Check your mobility device weight and dimensions to ensure proper fit*

home accessibility
is easier than you think

Best of IBS™ Award 2026

The National Association of Home Builders (NAHB) recognized the Luma lift in the Best Indoor Product category at the 2026 International Builders' Show.

Safety matters at Savaria

We put safety above everything at Savaria

It's why we design and build to meet or exceed safety code standards in every market where the Luma lift is sold. Electronic sensors above and below the lift stop it from moving if it encounters any obstructions. A door interlock system prevents the door from opening unless the lift is safely at the bottom or top landing. The overspeed arrestor ensures that the Luma lift never travels too fast on descent.

Savaria Link

Using your home wi-fi system, Savaria Link connects your Luma lift to software accessible by your installing dealer. Should your lift need troubleshooting in the future, your dealer can begin the process from their office, sometimes resolving issues with you over the phone. Savaria Link is an optional upgrade.

One Touch Alert

Programmed during installation by your local dealer, One Touch Alert is a two-way communication system*. A push of the button calls your emergency contact and allows you to speak and listen inside the lift. It's easy peace of mind that comes standard on your Luma lift.

** Requires an owner-supplied prepaid nano sim card*

Options

Add a door

You can configure your Luma lift with a second door to create straight-through access. It's ideal for mobility device users or when your floorplan works better with the additional entrance. On the Luma L model, you can also add an optional automatic door operator that opens with a simple hand swipe motion.

Shorter cab

If your home has low ceilings, choose the short-cab option that requires only 91" of overhead space on the second floor.

Add a seat

If you don't need to use your Luma lift with a mobility device, you can order your Luma with an optional folding seat.

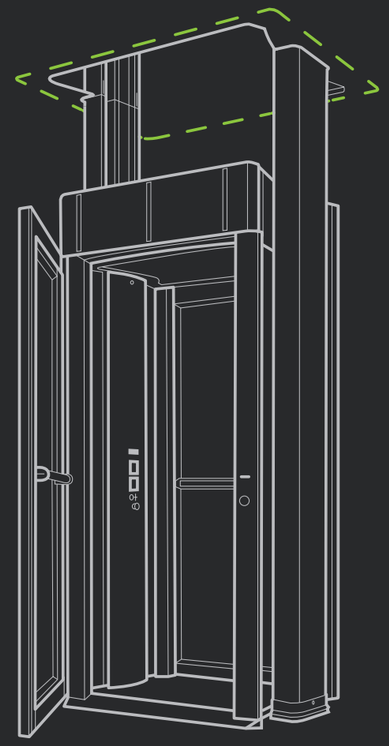

Designed for easy retrofit into existing homes

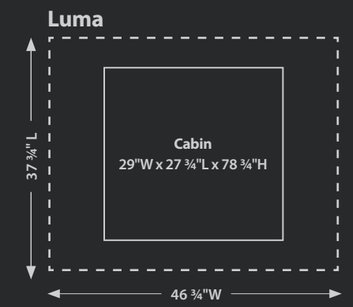

Retrofit ready

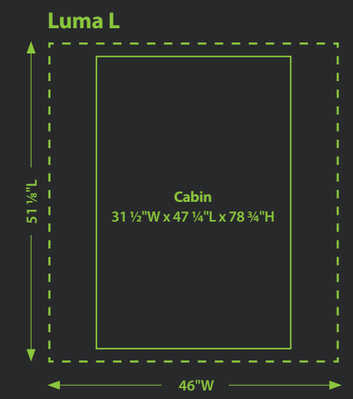

Site preparation, arranged by your local contractor or dealer, includes creating the floor cut-out with reinforcement for the opening. Standard electrical power will be needed for charging the lift, usually located in the floor plug area. Savaria supplies a painted metal liner for the cut-out for a clean, finished look.

Once the preparation is completed, your Savaria dealer will need 1 or 2 days to do the complete installation, including setting up the One Touch Alert and showing you how to use the lift. To maintain your 3-year Savaria parts warranty, your Luma lift requires an annual maintenance visit with your installing dealer.

Floor Cut-Out & Cab Dimensions

Please see the Planning Guide for complete details and precise construction measurements.

Common Specifications

Applications	Indoor, residential
Maximum travel	165 ¼" (4200 mm), 2 stops

better mobility for life

Savaria designs and manufactures one of the world's broadest portfolios of products dedicated to improving mobility and independence. From home elevators, wheelchair lifts and stairlifts to ceiling lifts and medical beds, Savaria provides mobility solutions for homes, healthcare facilities and public spaces.

With roots as a small family business, Savaria has grown into a publicly traded global company (TSX: SIS), across four continents. Our global footprint allows us to serve local markets while adapting products and solutions to meet the needs of our customers.

Today, more than 2,500 people worldwide are part of Savaria, including over 60 employees dedicated to research and development. We continue to expand and improve our solutions, with a particular focus on meeting the evolving mobility needs of an aging population. Across Savaria, our people are united by five core values—passion, quality, safety, collaboration and expertise—and a shared commitment to making a meaningful difference in people's lives.
